### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

Claims 2-45 are allowable over the prior art of record.

The examiner has found that the prior art of record does not teach or suggest or render obvious a system and method uses open short path first routing protocol for constraint route distribution and path setup comprising: provisioning of at least one OSPF router in the network that supports constraint path setup to be a traffic engineering route exchanger router and sending traffic engineering link state advertisement messages directly via unicast from the OSPF routers to only a nearest one of the at least one traffic engineering route exchange router without flooding the LSA to other routers in the network to compute constraint based traffic engineering routes in a network that supports constraint path setup and route distribution environment.

The Dobbins reference teaches link state advertisements but does not explicitly teach unicast only to one nearest router. The Fukushima reference teaches collecting link state information into a database but uses multicasting to request the information. The Crawley reference teaches reducing network overhead through explicit routing advertisements but utilizes multicasting to collect information before issuing packet with route. The Pillay-Esnault reference teaches reducing OSPF routing with link state advertisements that do not age. No prior art reference of record implements or suggests all the limitations of the claimed limitation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
